The QVT1 is a compact 4.3" wall-mounted hands-free video door telephone designed for compatibility with the Entryphone's Q series 2-wire system.

Featuring a sleek design, this video monitor telephone boasts a 16:9 colour display, touch-illuminated switches, and hands-free communication. Its five touch switches offer on/off, two door releases, auxiliary camera switching, and a ring-mute option. Users can customise settings through a menu for twelve ring tones, ringer volume, display preferences, and a timestamped caller history.

For those who wish to answer their door via smart phone, the QVT1W model includes WiFi capability, allowing calls to be forwarded using the Entryphone QV app on iOS or Android devices.

The monitor's two-wire bus cabling system ensures easy installation, making it suitable for both new and existing wiring set-ups.
